Inspection Report for North Sturbridge Road Solar Facility NPDES ID No.: MAR10031G

Inspection Date: 10/29/2021

			General Info	ormation					
Weather conditions during inspection	43°F, cloudy		Inspection	9:15AM	Inspection end time	10:00 AM			
•			ntal Scientist (BETA Group, Inc.) 8603297045						
Present Phase of Construction		Phase 1. NOTE: The access road and stabilized construction entrance has been established pursuant to the Phase 1 scope of work. However, the entirety of the Site has been cleared of trees. No grubbing/stumping has occurred other than that required to establish the Site access road.							
Inspection Location		North Sturbridge Road Solar Fa	cility - Entirety of Site ((0 North Sturbridge Road, Charlt	ton, MA 01507)				
Standard Frequency: Every 7 days		in may be subject to different inspects. 4 hours of a 0.25" rain or the occ							
Increased Frequency Every 7 days or Tier 3) Reduced Frequency: Twice during first Twice during first Once per month	r: and within month, no month, no and within	24 hours of a 0.25" rain (for area o more than 14 calendar days ap o more than 14 calendar days ap on 24 hours of a 0.25" rain (for aric	os of sites discharging part; then once per m part; then once more d, semi-arid, or drough	to sediment or nutrient-impaired onth after first month; (for stabil within 24 hours of a 0.25" rain (for ont-stricken areas during seasona	d waters or to wate ized areas) or stabilized areas (on "linear construction sites")			
Uses this inspection triggered by a 0.25" storm event? Yes No If yes, how did you determined whether a 0.25" storm event has occurred? Rain gauge on site Weather station representative of site. Specify weather station source: Worcester Regional Airport Total rainfall amount that triggered the inspection (inches): 0.25" Was this inspection triggered by the occurrence of runoff from snowmelt sufficient to cause a discharge? Yes No

Jnsafe	Conditions	for	Insi	pection
Jiijaic	Conditions	101	11131	

Did you determine that any portion of your site was unsafe for inspection per CGP Part 4.1.5? \Bigsiz Yes \Bigsiz No

If "yes", complete the following:

- Describe the conditions that prevented you from conducting the inspection in this location: N/A
- Location where conditions were found: N/A

Condition and Effectiveness of Erosion and Sediment (E&S) Controls (CGP Part 2.2)					
Type/Location of E&S Control	Maintenance Needed?*				
1. Silt Fence and Straw Wattles	Yes (As of 9/2/2021)	No	9/2/ 2021	A breach was observed at Discharge 2. Although the double row of straw bales is intact, silt fence was observed to be knocked over and signs of stormwater flow were detected in the area beyond the fence. A minor tear was identified in a section of silt fence on the southern side of the Site with no erosion observed. Minor degradation of a straw wattle was observed on the southeastern side of the Site; no erosion was observed but pools of water were found to be forming behind the straw wattle.	
Stabilized Construction Entrance (Site Entrance – Access Road) Stump and Soil Stockpile Area	No (As of 9/2/2021)	No		A tree was knocked over and laying on the silt fence on the on the northwestern portion of the site in Zone 5. Hydroseed was applied to exposed soil in this area and continues to germinate, some grass seedlings are now observed.	
Stump and soil stockpile Alea Dust Controls	7/22/2021) N/A	No N/A	10/29/ 2021	Minor tears were observed in the silt fence along the eastern boundaries of the Site, due to staples becoming dislodged from wooden stakes. The straw wattles are still intact.	
5. Jute Mesh (Steep Slopes)	N/A	N/A			
6. Temporary Seeding	No (As of 9/2/2021)	No	7/22/2021	Hydroseed has been applied to the earthen access road and hand- application of seed was performed within the area beyond the limit of work that was subjected to Discharge 1. Germination was

Stabilization of Exposed Soil (CGP Part 2.2.14)						
Stabilization Area [insert additional rows if applicable]	Stabilization Method	Have You Initiated Stabilization?	Notes			
Earthen access road leading to stockpile area	Straw mulch or hydroseed	⊠Yes 7/30/2021 □No	The stockpile area and associated access road have been hydroseeded. Germination has begun and the area will be monitored for successful establishment.			
Informal access road along northern portion of the Site	Straw mulch or hydroseed	□Yes [Enter date] ⊠No	Erosion channels are beginning to form within upgradient portions of the informal access road (Figure 1). The contractor indicated that stabilization by smoothing out soils and seeding or spreading mulch would occur on 7/30/2021. Stabilization of this area has not been initiated. After inspection of the area on 8/24/2021, it was determined that			

^{*} Note: The permit differentiates between conditions requiring routine maintenance, and those requiring corrective action. The permit requires maintenance in order to keep controls in effective operating condition. Corrective actions are triggered only for specific conditions, which include: 1) A stormwater control needs repair or replacement (beyond routine maintenance) if it is not operating as intended; 2) A stormwater control necessary to comply with the permit was never installed or was installed incorrectly; 3) You become aware that the stormwater controls you have installed and are maintaining are not effective enough for the discharge to meet applicable water quality standards or applicable requirements in Part 3.1; 4) One of the prohibited discharges in Part 1.3 is occurring or has occurred; or 5) EPA requires corrective actions as a result of a permit violation found during an inspection carried out under Part 4.8. If a condition on your site requires a corrective action, you must also fill out a corrective action form found at https://www.epa.gov/npdes/stormwater-discharges-construction-activities#resources. See Part 5 of the permit for more information.

Inspection Report for North Sturbridge Road Solar Facility NPDES ID No.: MAR10031G Inspection Date: 10/29/2021

			temporary swales would likely alleviate the issue of channelization in this area; however, these swales will not be constructed until work resumes at the Site in October (pending local approval). This area will continue to be monitored; however, stabilization is not required since the area is not discharging sediment beyond the limits of work.
Area beyond the limits of work at Discharge 1	Hand application of seed	⊠Yes 8/24/2021 □No	The sediment deposit previously observed has been removed from beyond the limits of work and the area has been seeded. No sediment migrated within 50 feet of a "water of the US". Straw and additional seed was applied on 8/24/2021 and will be monitored for successful establishment.
Area beyond limits of work at Discharge 2	Hand application of seed	□Yes Enter Date ⊠No	Stabilization required

Description of Discharges (CGP Part 4.6.6)					
Was a stormwater discharge or other discharge occurring from any part of your site at the time of the inspection? ☐Yes ☐No If "yes", provide the following information for each point of discharge:					
Discharge Location	Observations				
Discharge 1	Describe the discharge: Breach in silt fence allowed runoff to bypass erosion controls. At points of discharge and the channels and banks of surface waters in the immediate vicinity, are there any visible signs of erosion and/or sediment accumulation that can be attributed to your discharge? Yes No If yes, describe what you see, specify the location(s) where these conditions were found, and indicate whether modification, maintenance, or corrective action is needed to resolve the issue: Small areas of bare soil observed in area immediately beyond perimeter controls. Repairs to erosion controls and re-seeding of damaged areas is required.
